

THE IDGLOBAL CORP. (IDGC.PK), ENCOUNTER TECHNOLOGIES, INC. (ENTI.PK) AND IDGREEN

For some while, IDGC has been conducting certain operations through its totally-held subsidiary, Farallon, Inc., a Colorado corporation ("Farallon"). Farallon has been in the business of marketing high-quality coffee beans from Café LaFortuna and private labeled for www.harbourtrading.com, an internet-based fresh seafood meal service, that was listed on Oprah's Christmas list, to various specialty retailers and foodservice operations.

Farallon, Inc. will handle the complete Curation, Completion, and Launch of Supplemental Coffees' brand and product line. We will procure the Creative Development and Physical Development to see the product created and produced. We will introduce and facilitate initial and ongoing E-Commerce sales. The Farallon, Inc. team will oversee and direct the services of Design and E-Commerce Professionals to achieve the goals of Supplemental Coffee. The Company will establish a customer base throughout the United States and Canada and participate in the \$16.4 billion coffee industry by supplying the highest-quality innovative coffee products in the world.

As part of the Farallon, Inc. Family, Prestige Liquids, LLC, a 50-50% Joint Venture project, recently moved equipment into a new facility in Addison, Illinois and teamed up with an existing company to focus on a new premium motor oil product for www.glennelectric.com customers throughout North America and will include its private label product which is just waiting on Trademark Approval, as well as signing a new production contract with Naturologyx for water-based organic fertilizer. This segment will be the consumer and industrial products fulfillment company in the existing 10,000 sq. ft. facility.

Timelines for Q1 2018 will include creative branding and product line decisions. Manufacturing and Distribution Partners decisions will be established. We will also include Trademark, domain and brand registration as well as Full Project Budget and Cost Forecasting completion.

Timelines for Q2 2018 Phase 1 product line iterations launch to include Website and E-Commerce platform launch. The team will begin the SEO marketing and online paid advertising campaigns as well as full Social media and direct brand advertising.

Timelines for Q3 2018 Phase 2 product line iterations launch. This timeframe will also coincide with Brick and mortar retail strategy decisions as well as North American Retail Distribution partner selection. We will set the trade show budget and attendance schedule decisions will be made.

Timelines for Q4 2018 Retail Sales and distribution begin of Supplemental Coffee Trade show attendance exhibitions. All marketing, customer service, and product line development continues.

Next, there are IDGC's operations through Monochrome Corp. ("Monochrome"). I believe that your strategy to develop Monochrome is unique and current in today's marketplace. Your Monochrome business model incorporates two high-growth markets to create an exciting multi-channel business opportunity within IDGC's distribution network. This includes your traditional brick-and-mortar channels as well as by Monochrome's utilization of e-commerce technologies and emerging pipelines to capitalize on the new developments in today's CBD market. I understand that the CBD market is driven by health concerns and expanding product awareness. I am of the opinion by your combining the two, Monochrome can expect to meet market demand, with a multitude of products that is just beginning to realize the company's and the market's potential. I think Monochrome's initial development of a cold-brewed CBD product to be sold in an 8.4 oz. bottle and in a 2.4 oz. "shot size" is a creative step in today's CBD market. Moreover, by Monochrome's exploitation of its distribution channels in the traditional and contemporary delivery methods (by using such partners as major beverage and food distributors) will best serve the company's development. Your use of non-traditional channels (that is, through brokers who will drive business in health care, universities, and health awareness markets) is equally impressive. I am certain as Monochrome's business grows, you will also have partners for other products in the Hemp and CBD space that will expand as Monochrome's product development increases.

In addition, Monochrome will Partner with Encounter Technologies (ENTI.PK) and begin the process of obtaining a DEA 225 license. The Company will be an industry leader, if granted, the application and initial fees will be between \$35k and \$50k. The Combined Companies' (ENTI.PK and IDGC.PK – Monochrome Corp.) will begin the acquisition process of existing Licensed MJ Companies in the United States of America, (focusing in Washington, Oregon, and California accordingly).

Moving on to Azure Blockchain Inc. ("Azure"). The company that will leverage its blockchain, real estate, and business assets and relationships. The blockchain technology through Azure is groundbreaking, because blockchain technology is cryptographically secure, it shares record of transactions, and is updated by a network of computers

instead of a central authority. My understanding is that every transaction within the system is secure, timestamped, and linked with previous and subsequent transactions that can be seen by anyone with access to a given blockchain. I must agree with you when you told me the technology has the potential to be ideal when it comes to simplifying complicated transactions and helping to digitally track physical assets, such as electricity, as they make their way from point A to point B. I think that potential makes the technology very attractive to large utilities and scrappy energy startups alike, because blockchain can be used to monitor energy consumption and trading alike. Moreover, I understand that you further want Azure to incorporate technology can be used in conjunction with Internet-of-Things technology to better measure electricity usage and collect payments. I can see where this could also help consumers see where electricity is coming from and whether, for instance, it is from a renewable source. I was impressed when you told me that Azure's blockchain technology could be used by large electricity customers to help trade energy between them. It is conceivable that a factory could sell or trade its unused power to another factory that needs it.

The Azure company beginning in 2/2018 will focus on what it believes to be a financial solutions provider for the MJ Industry including a approval of a Proprietary Federally Regulated Banking Solution.

In addition to IDGC's plan of operations, I understand that we will share in the businesses that we have collectively been negotiating to acquire; namely, the 15 restaurants in Utah, the hotel in Utah, and the five office buildings in Las Vegas. It is my understanding that we will commit the hotel and nine restaurants to IDGC and that the remaining restaurants in Utah and the office buildings will be acquired by ENTI. (ENTI will be forming a totally-held subsidiary early next week to arrange for the acquisition of the aforementioned properties.
